Summary

AI engineer who builds LLM agents and AI features into working business systems. At NNPC Consulting I build multi-agent automation with n8n, retrieval and an on-premise LLM; in my senior project I shipped a Gemini tool-calling assistant on a live retail database. Data Science graduate (January 2027) with computer vision and ML modelling experience.

Experience

AI Intern, AI Agents & Automation, NNPC Consulting Co., Ltd. · Bangkok · 08/2026 to present

- Built a multi-agent automation system with four agents (customer service, marketing, sales, finance) in n8n, using Qdrant for retrieval, PostgreSQL for proposals and audit logs, and an on-premise Ollama LLM server.
- Enforced tenant isolation so each client's data stays separate across agents and the vector store.
- Evaluated the NABU knowledge platform hands-on: built document libraries, tested question answering, embedded its MIVA chat in a responsive web page, and proposed department-level use cases.

Projects

Appleland Admin, AI assistant for a live retail & playground business · Senior Project II · 06/2026 to present · GitHub

- Designed an AI assistant on Gemini function calling: 17 read-only data tools, up to 5 chained calls per question, answers drawn as charts, API key kept on the server.
- Made it robust on a slow free-tier backend: separate time limits for model and data calls, and interrupted tool calls finished and recorded instead of lost.
- Part of a full admin system for a baby store and playground in Naypyitaw, Myanmar, used daily by the shop's staff: point of sale, QR ticketing, inventory and reports (React 19, about 200 commits as frontend lead).

Zyne, cross-platform app with built-in AI · 2026 · GitHub

- Added Gemini features (next-step suggestions, a daily reflection prompt) to a Tauri app for Windows and Android, with the API key held in the Rust layer, never in the web bundle.

SEEiT-CV, offline object detection for visually impaired users · 05/2025 · GitHub

- Real-time on-device detection (TensorFlow Lite, ML Kit) on Android with audio feedback that works without internet; tuned on custom data for low light.

Skills

- **LLMs & agents:** Gemini function calling, retrieval (Qdrant), n8n agent workflows, Ollama, prompt design
- **ML & data:** Python, Pandas, scikit-learn, computer vision, TensorFlow Lite, SQL
- **Software:** JavaScript / TypeScript, React, FastAPI, Tauri (Rust), Docker, Git, Vercel

Education

Assumption University · Bangkok, Thailand · graduation 23 January 2027

B.Sc. Computer Science, Data Science concentration · GPA 3.27

Languages

Burmese (native) · English (professional working proficiency) · Japanese (beginner, studied to JLPT N5) · German (beginner, currently learning)
